3

- **Total Power Outlets**

3

- **Amperage**

15 Amps

- **Input Voltage**

100-240VAC; 60HZ;

- **Max.Current**

15A

- **Max.Power Rating**

1875W;

- **USB Port Output**

DC 5V, Total 3A;

- **Brand**

POWSAV

Introduction

Portable Travel Adaptor This little plug-in adapter only takes up one wall socket, making it an excellent outlet splitter for smartphones, tablets, laptops, kitchen appliances, and other electrical devices. Up to 6 devices can be charged concurrently using the 4 side outlets and USB ports; excellent for power adapters and bulky plugs. High-speed USB ports automatically identify charging devices and deliver optimal charging speed, up to 2.4A per port.

USB Plug with 3 Ports: 5V 3.0A shared rating; high-speed USB ports immediately detect charging devices and deliver optimal charging speed, up to 2.4A per port. **Unique Cube Design Power Strip:** The three side outlets, each measuring 2.5*1.9*1.9 inches, can accommodate one large adaptor and two standard plugs at once. Ideal for usage on cruise ships, at hotels, at home, in the office, or in dorm rooms. Surge-protected power strips are not permitted on most cruise ships for safety concerns. This multi-outlet plug is non-surge and is approved by major cruise lines such as Carnival, Royal Caribbean, Princess, Disney, and others.

What's In the Box?

- 1 x Electric Wall Outlet with USB Charger
- 1 x Instruction manual
- 1 x Paper Box

Frequently Asked Questions

1. Is there room to plug in something to the top outlet with this plugged in?

Yes, you can, but you would lose the use of one of its outlets. You would be better served to put it on the top

and then you can easily plug something into the bottom outlet without losing any of the Multi Plugs outlets. Hope that made sense. Btw I love this thing and would buy it again.

2. So, if I use all 3 USB ports at the same time, I'll get a charging speed of only 1.0 per port!?

As mentioned: USB Plug with 3 Ports: 5V 3.0A shared rating; high-speed USB ports automatically detect charging devices and deliver optimal charging speed, up to 2.4A per port. max 3 amps total then based on needs.

3. Can it charge 3 pads at the same time?

Yes. But it won't give them all a very fast charge. Depending on the iPad they typically need 2amps each to get a good charge. This will only give 1 amp to each device if you have them all being used. But if you use two USB ports each will get an amp and a half. If you use one USB port, you'll get the fastest charge possible for the iPad.

4. If this is plugged into the lower socket of a wall plug, is the top socket still usable?

No, I do not believe the top socket will be accessible if this charger is placed in the bottom plug, not enough room. I have my plugin the top socket which makes my bottom plug accessible for use by other appliances.

5. Can you plug in first and Chromecast into the USB ports at the same time?

It just provides power so any two USB connections work, although they are close together so must be a simple USB plug-in.

6. Will this work with Samsung Tab S6 tablet?

I don't have a Samsung tablet but I do use it to charge my Compaq CT101 tablet and HP laptop and it works fine.

7. Can you put 2 of these in one wall outlet?

The Dimensions of this power strip: 2.5*1.9*1.9 INCH, it seems just can put 1 in a wall outlet

8. Can this device use usb3.0 power a wall outlet port, so I can use my backup battery to charge my drone batteries?

Not sure but I use it to charge my iPad and our security cameras and my granddaughters plug both their phones in at the same time hope this helped

9. Can this be used on surge protector strips?

Yes if there is room on the strip for the plug and the strip accepts a 3-pronged plug.

10. Can you use this with a GFI outlet?

Sure but that does mean everything plugged into it which means more possible ways to trip but I have it in my GFI in the bathroom and works fine.

11. Will this work on Royal Caribbean cruise ships? Cruising next month & thinking of buying this one.

Probably. I don't see why not. Worked on Celebrity.

12. Is the right-side grounding plug facing up or down?

The plugs rotate around the box and non of them face up or down, look at the picture shown in add.

13. Does this protect against surges at home?

No, it does NOT. There are other ones you can buy that do have surge protection.

14. Can this be used for constant power use? I plan on using this to plug in another outlet that has my Xbox, apple tv, and tv. can this handle all that?

Yes, the wall outlets can handle them but we suggest it is better to check the specification of the USB wall charger and your device before you use any electronics.

15. Is it compatible with Note 10 Plus?

YES! USB ports are compatible with anything that can plug into a USB port! If you use only one USB port on

this device, it will give you up to 2.4 amps. This might possibly not give your Note 10 *fast charging* but it will at least get 2amps which is very decent.

16. Can it be used outdoors? Is it waterproof?

Nope, it is not waterproof.
